## **BIOMARK ANNOUNCES PARTNERSHIP WITH THE METABOLOMICS INNOVATION CENTRE**

Vancouver, British Columbia – (March 27, 2015) – BioMark Diagnostics Inc. (“BioMark”) (CSE: BUX, FSE: 20B, OTCQB : BMKDF) is pleased to announce that it has partnered with The Metabolomics Innovation Centre (“TMIC”), a Genome Canada-funded Science and Technology Innovation Centre located at the University of Alberta and University of Victoria. TMIC provides scientific expertise, analytical services, bioinformatics tools, and customized technology development which complements BioMark’s future research directions in lung, prostate, breast and colon cancer. This relationship will strengthen BioMark’s capabilities and resources in the discovery, validation and translation of future metabolomic-based diagnostic tests for early cancer detection. In collaboration with TMIC, BioMark plans to develop additional novel tests for point-of-care testing.

Dr. David Wishart, Professor at the University of Alberta and Director of TMIC states: “TMIC is very excited about collaborating with BioMark to develop and identify new metabolite biomarkers in early lung cancer detection and potentially for assessing response to treatment. TMIC looks forward to a very productive collaboration with BioMark. “

Both TMIC and BioMark will be presenting an abstract at the 11<sup>th</sup> International Conference of The Metabolomics Society to be held between June 29<sup>th</sup> to July 2<sup>nd</sup> at the University of California, Davis USA.

President and CEO of BioMark, Rashid Ahmed says: “We are delighted to be collaborating with TMIC which is Canada’s leading centre for advancement in metabolomics. This is a strategic partnership for BioMark since our technology is metabolomics based.”

### **About TMIC:**

The Metabolomics Innovation Centre (TMIC) is a Genome Canada funded Science & Technology Innovation Centre for metabolomics research, technology development and services. TMIC builds on metabolomics expertise at the University of Alberta and the University of Victoria, which includes \$20 million in state-of-the-art metabolomics equipment and ongoing investment for “omics” research and technologies by Genome Canada, Genome British Columbia and Genome Alberta. TMIC’s technologies are based on NMR, mass spectrometry, gas chromatography and novel bioinformatics tools to support clinical trial research, biomedical studies, agricultural studies, nutrient profiling and environmental testing for applications such as human health and disease, petroleum research, forensics, food and nutrition, anti-doping, and textile sciences. TMIC provides access to cutting-edge metabolomic and bioinformatics technologies for Genome Canada-funded projects and the broader research community

including government, academia and industry. For more information, visit [www.metabolomicscentre.ca](http://www.metabolomicscentre.ca).

### **About BioMark Diagnostics Inc.**

BioMark is developing proprietary, non-invasive, and accurate cancer diagnostic solutions which can help detect, monitor and assess treatment for cancer early and cost effectively. The technology can also be used for measuring response to treatment and potentially for serial monitoring for cancer survivors.

Further information about BioMark is available under its profile on the SEDAR website [www.sedar.com](http://www.sedar.com) and on the CSE website [www.thecse.ca](http://www.thecse.ca).
